Certificate of Examination for Suitability to Syndicate

At the request of Mr. Scott Darby of Darby Bloodstock, I examined the 2yo brown Thoroughbred filly by Lonhro from Body and Soul (branded Nsh: LL Osh: 5 over 5). The examination was performed at the Magic Millions grounds, Gold Coast Qld on the 24th November 2007.

The examination was limited to a physical examination, assessment of conformation, examination of the Radiographs of the filly lodged for the sale, and an endoscope examination performed by Dr. Steven Rayner (see attached report).

At the time of examination the filly was in good health and condition and showed no symptoms of disease or infection. She had a laceration to the lateral aspect of the RH cannon which did not involve any tendons, joints or important structures and which should heal quickly without complications. She was given a course of antibiotics (Penicillin and Gentamycin) for 5 days as a precaution against infection and Tetanus prophylaxis was administered.

Examination when led at the walk and trot revealed no abnormalities. Auscultation of the heart and lungs revealed normal heart and lung sounds. I could find no significant abnormalities of body or limb and palpation of the tendons and joints revealed no pain swelling or fluid.

Her body and leg conformation was good and she stood at approximately 16.1hh. She has a good head and neck and a good bold eye.

Examination of the radiographs revealed no sign of bone or joint disease and no bone injury was present at the site of the laceration on her hind cannon.

The endoscope examination by Dr Rayner revealed no abnormalities.

Within the limits of the examination, the filly is in my opinion a suitable subject for syndication.

I declare that I have no financial interest in the filly or in Darby Syndications.
